

Sweeps Instructions

Included:

- Left and Right Sweep
- 4 Attachment Bolts with Nuts

Each Sweep (left or right) in the pair will require two bolts to attach to the tool bar of the Wheel Hoe (**Figure 1**). Use two of the similarly shaped (either square or diamond) holes in the Sweeps to ensure bolts have adequate spacing. This is why different shaped holes are punched in the attachment arms of the Sweeps.

Turn the Sweeps inward for a “stirrup-hoe” type setup (**Figure 2**), or turn the Sweeps outward to weed close to plants and/or straddle a row with the Double Wheel Hoe (**Figure 3**). Using the five different holes on the attachment arms of the Sweeps, you can change the position or angle of each Sweep.
